

Advanced protection for mid-sized projects

SIMPLEX 4010ES Panel: addressability, scalability and flexibility for mid-size facilities

Why should owners, managers and occupants of small- to mid-sized facilities settle for a fire alarm system that offers only basic features and performance?

With our industry-leading SIMPLEX technology, you don't have to 'settle' at all.

SIMPLEX 4010ES Benefits

- **Configurable up to 1,000 points**
- **Powerful networking capabilities**
- **Suppression release control listed**
- **Fully addressable architecture for increased flexibility and performance**
- **Revolutionary self-testing notification appliances**

The addressable SIMPLEX 4010ES panel offers our most advanced technology in a package that's the right size and cost for a small or mid-sized facility.

As a result, the 4010ES delivers exceptional value with features like simpler installation, easier maintenance, self-testing notification appliances, full networking capabilities, suppression release control and lower life-cycle costs. The 4010ES panel gives you all of that... and more.

Scalable for growing needs

With a 250 point base configuration that expands to 1,000 points, the 4010ES is ideally suited for mid-sized facilities like hotels and motels, hospitals, clinics, retail stores, schools, data management centers and commercial buildings. The 4010ES can handle the needs of your facility today and grow as you do.

Powerful networking capabilities

By adding an optional interface card, you can unlock full SIMPLEX networking capabilities for the 4010ES. Networked 4010ES panels are fully compatible with other SIMPLEX network panels and the entire suite of TrueSite Workstation system management solutions.

This means you can create a powerful network solution for small- and medium-sized facilities. And for larger multi-building environments such as hospitals, airports, universities and industrial facilities, up to 687 nodes can be networked together.

Smooth installation

Fully addressable 4010ES panels integrate seamlessly with addressable devices and appliances and offer a flexible wiring infrastructure that can help make installation faster, easier, and more budget-friendly.

Suppression release

Compatible with the full range of SIMPLEX suppression release peripherals and maintenance switches, the 4010ES is a flexible solution for controlling single or multi-hazard suppression systems.

Maximizing protection, minimizing disruptions

With built-in addressable technology, the 4010ES panel is compatible with advanced notification appliances that continuously report their status. The panel can automatically generate a notification if maintenance is needed, improving protection and helping ensure optimal operation of the system at all times.

Revolutionary Self-Testing appliances

By connecting the 4010ES to TrueAlert ES notification appliances, you can utilize our NFPA-compliant self-test feature that allows testing to be performed at any time of day

or night, helping minimize disruptions to building operations and occupants. The self-test process takes just seconds and can be initiated manually or scheduled to run automatically. This is designed to eliminate the need for manual, after-hours testing and significantly helps save time, money and labor. Once testing is complete, information and test history can easily be retrieved from the panel for compliance purposes.

Right-sized for you

Whether you need to protect a new mid-sized facility or renovate/expand an existing one, the SIMPLEX 4010ES offers an advanced solution that gives you access to the latest SIMPLEX technology at a budget suited to your needs.
