

**FEATURES:**

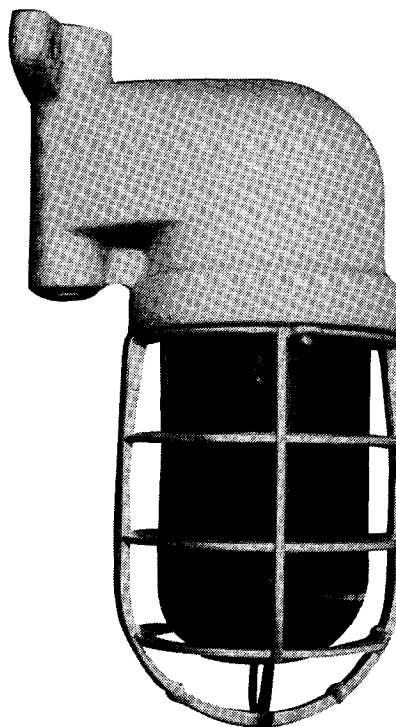

- Weatherproof Construction
- Corrosion-Resistant
- Complies with NEC:  
Class I, Division-2  
Class II, Division-2  
Class III
- Equipped with Red Lens

**DESCRIPTION:**

The 2904-9060 is a weatherproof fixture for wall mounting. It is intended for 120VAC operations using a bulb of not over 100 watts (bulb not furnished). The globe furnished is red. It may be used with fire alarm systems when the proper relay devices are used to actuate this unit or for other applications requiring this type of lamp.

The lamp circuit power should be obtained from the same source as for the fire alarm control panel and controlled either separately or in groups of parallel lamps. In a typical indoor application, this fixture would be installed in addition to the regular audible alarm signals throughout the building.

The housing is furnished for connection with 1/2" (13mm) threaded conduit. A 1/2" threaded plug is also provided for use in either top or bottom of the fixture.
